PROFESSIONAL SUMMARY

Full Stack Software Engineer and Machine Learning Engineer with hands-on experience in NetSuite ERP development, web integrations, and AI/ML systems. Proficient in Angular, Node.js, TypeScript, Python, and SuiteScript. Skilled in LLM orchestration, RAG pipelines, and AI Agents. Experienced delivering LATAM financial compliance solutions and internal engineering tools in Agile/Scrum global teams. Advanced English (C1).

TECHNICAL SKILLS

AI & ML: LLM Configuration, RAG Systems, LangChain, AI Agents, Prompt Engineering, Document Retrieval, Data Science

Languages: Python, JavaScript, TypeScript, C#, SQL

Frameworks: Angular, React, Vue.js, Node.js, .NET Core, ASP.NET, Express.js, SuiteScript, NumPy, Pandas, Matplotlib

Databases: PostgreSQL, SQL Server, MongoDB, Vector DBs (ChromaDB / Pinecone), Jupyter Notebooks

Cloud & Tools: Azure, AWS, Google Cloud, Git / GitHub, Scrum / Agile

PROFESSIONAL EXPERIENCE

NetSuite Software Engineer

Bring IT | Sep 2024 – Apr 2026

- Selected for the 'Make Your Mark' program focused on NetSuite ERP architecture and cloud systems.
- Automated Exógenos regulatory reporting:** designed and built an end-to-end synchronization system connecting NetSuite's native database with an external PostgreSQL database, eliminating a previously manual, error-prone reporting process. Delivered an **Angular application embedded directly inside NetSuite** that let finance users generate compliant Exógenos reports on demand, cutting report preparation time and removing manual reconciliation errors.
- Built an internal automated testing platform for QA:** recognizing that SuiteScript customizations had no reliable way to be regression-tested, designed and shipped a second **embedded Angular tool** that empowered the QA team to create, manage, and run their own test suites against SuiteScript scripts — enabling automated, repeatable validation and significantly reducing the risk of production regressions.
- Architected integrations using **Angular, Node.js, and PostgreSQL** bridging ERP data with external business applications.
- Engineered financial localization reporting engines for LATAM regulatory compliance: **Exógenos (Colombia), SAT (Mexico), PLE (Peru)**.
- Built and maintained complex server-side business logic using **JavaScript, TypeScript, and SuiteScript**.
- Collaborated in Agile/Scrum methodologies within cross-functional, international development teams.

Customer Support Specialist

Sutherland | 2022 – 2024

- Delivered high-tier bilingual technical support with strong SLA compliance.
- Strengthened cross-cultural communication and structured problem-solving skills.

AI & MACHINE LEARNING PROJECTS

- RAG & Document Retrieval System:** Built an end-to-end Retrieval-Augmented Generation pipeline with LangChain — parsing, chunking, embedding, and querying large document repositories.
- LLM API Integration:** Configured and benchmarked commercial and open-source LLM APIs using advanced Prompt Engineering for structured outputs and context management.
- Data Science Pipelines:** Engineered data workflows with Python, Pandas, NumPy, and PostgreSQL; designed ML model environments using Anaconda and Jupyter.
